AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) E1 cand E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant E1, E2, and E1/E2 proteins. C in vectors for the production of recombinant E1, E2, and E1/E2 proteins. C invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage, or a reduction step with a correspond cleavage agent, after 1918 of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV antibodies in a sample, and in a serotyping assay for detecting one or constructs can also be immobilised on a solid substrate and incorporated constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed E1, E2 and E1/E2, and eliminates contaminating proteins. Antigens isolated by known are reactive with human sera than those isolated by known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV) specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an B1 and an B2 protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV B1 and/or B2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for the vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.

AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) El and E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant E1, E2, and E1/E2 proteins: The recombinant proteins can then be isolated using a method of the

Claim 23; Fig 21; 146pp; English.

```
invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage agent, after lysis of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV more serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed E1, E2 and E1/E2, and eliminates contaminating proteins. Antigens isolated using this method are more reactive with human sera than those isolated by known

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300
                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligometic recombinant envelope proteins selected from an El and specific oligometic recombinant envelope proteins selected from an El and seful for inducing HCV specific antibodies or for immunising humans against HCV. The recombinant HCV El and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180

AMTI2704-T12709 and AATI2961-T12974 represent hepatitis C virus (HCV) El and E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant El, E2, and El/E2 proteins. The recombinant proteins can then be isolated using a method of the invention. In the method, the envelope proteins are purified by a carrying out a disulphide bond cleavage, or a reduction step with a crarying out a disulphide bond cleavage, or a reduction step with a crarying out a disulphide bond cleavage, or a reduction step with a crarying out a disulphide bond cleavage agent, after lysis of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used for antibodies in a sample, and in a serctyping assay for detecting one or antibodies in a sample, and in a serctyping assay for detecting one or constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the
                                                                                                                                                                                                                    540
                                                                                                                                                                                                                                                                                                                                                       480
                                                                                                                                                           480

```
inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an B1 and an B2 protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV B1 and/or B2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            481 GGGGATCTCTGCGGATCTGTCTTCTCGTCTCCCAGCTGTTCACCATCTCGCCTCGCCGG 540

The vaccines useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV El and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.

AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) E1
and E2 protein coding sequence constructs. These sequences are included
in vectors for the production of recombinant E1, E2, and E1/E2 proteins.
The recombinant proteins can then be isolated using a method of the
invention. In the method, the envelope proteins are purified by
carrying out a disulphide bond cleavage, or a reduction step with a
disulphide bond cleavage agent, after lysis of recombinant host cells.
The constructs containing the purified HCV envelope proteins can be used
for vaccinating humans against HCV, for in vitro detecting one or
antibodies in a sample, and in a seroctyping assay for detecting one or
more serological types of HCV present in a biological sample. The
constructs can also be immobilised on a solid substrate and incorporated
into a reversed phase hybridisation assay for determining the presence or
the genotype of HCV. The new purification method preserves the
conformation of the recombinantly expressed E1, E2 and E1/E2, and
are more rearried man are a than those isolated using this method
are more rearried with human ears than those isolated wing this method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    244
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   244

and E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant E1, E2, and E1/E2 proteins. The recombinant proteins can then be isolated using a method of the invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage agent, after lysis of recombinant host calls. The constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV antibodies in a sample, and in a serotyping assay for detecting one or more serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed E1, E2 and E1/E2, and eliminates contaminating proteins. Antigens isolated using this method are more reactive with human sera than those isolated by known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                125 AAGACGGCGTGAACTATGCAACAGGGAATTTGCCTGGTTGCTCTTTCTCTATCTTCCTCT 184

The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an El and an E2 protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV El and/or E2 proteins are useful as against HCV. The recombinant HCV screening and confirmatory antibody vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GAGACGGTGCAGACTGCAATTGCTCAATCTATCCCGGCCACATAACGGGTCACGTATG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This nucleotide comprises the hepatitis C virus (HCV) cDNA insert in plasmid pA10. This cDNA was obtained by PCR amplification of HCV conds using primers (see AAV38849-50) designed to amplify the HCV core gene. The PCR product was cloned into pBluescript KS to create pA10. It encodes a 224-amino acid polypeptide (see AAW62825). The HCV core protein can be used as an immunogen in novel fusion proteins (see AAW62657-59) that comprise HCV core protein and at least 19 amino acids (see AAW62827) of the C terminal sequence of the large protein from hepatitis D virus (L-HDAg). In novel virus-like partials of the invention, a fusion protein immunogen is at least partially enveloped by hepatitis B surface antigen. The virus-like particle is used to ameliorate or protect against infections caused by hepatitis B virus and/or another microorganism, especially HCV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           GGTAAGGCCATCGATACCCTTACGTGCGGCTTCGCCGACCTCGTGGGGTACATTCCGCTC

                                                                                                                                                                                                                                   The sequence is that of NANB hepatitis virus polynucleotide N-2540-2 which codes for a non-A, non-B (NANB) hepatitis virus gene HC-CM. The polypeptide it encodes may be used in a system for detecting NANB hepatitis. This method is highly specific and sensitive, and can detect NANB hepatitis virus which could not be detected by conventional methods.
                                                                                                                    Antigen related to non-A and non-B hepatitis virus - comprises non-translation region comprising 340 - 341 mols. of nucleotides, non-translation region comprising 1885 - 2551 mols. of nucleotides including region 1,149 and, etc.

The location of the mutations are detailed in the specification. Also included are (1) an expression vector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma cell the altered nucleic acids; (4) producing an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New Hepatitis C virus (HCV) replicons comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) internal ribosome entry site (IRES) region, useful in studying HCV replication

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            364
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The sequences given in AAQ63752-53 represent fragments of the non-A, non-B hepatitis virus (NANBHV) genome. These fragments were amplified using the primers given in AAQ63732-51. These primers were used in the detection of NANBH. The primers are based on the 5'-terminal region and the core protein coding region. The method allows highly sensitive detection of NANBHV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TCGTCGGCGCCCCCTAGGGGGCGCTGCCAGGGCCCTGGCGCATGGCGTCCGGGTTCTGG 124

HCV (hepatitis C virus) replicon enhanced cell or which containing a functional HCV replicon; (5) an HCV replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful instruction HCV replicon, and HCV and host cell interactions, producing HCV RAA and proteins, and providing a system for measuring the ability of a compound to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and hepatocellular carcinoma. The present sequence is the HCV replicon Con 1, used as a basis for the adaptive mutations of the invention.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecost digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: on bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

/clone lib="Cabernet Sauvignon Leaf. Sfil; Site_2:
Sfil; CA12EI is a cDNA library of Cabernet Sauvignon
leaves. The leaves were collected on July 25, 2001, in
Napa Valley, California, and represent leaves in
mid-season development. These leaves were verified to be
infected with the bacterial pathogen, Xylella fastidiosa,
based on a diagnostic assay using PCR and Xylella-specific
primer pairs. The plants were asymptomatic at the time of
collection, but later developed symptoms. CDNAs were made
by oligo-dr priming and directionally cloned. 5'and 3'
adaptors were used in cloning as follows:
                                                                                                                    vitis vinifera
Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnollophyta; eudicotyledons; core eudicots; rosids
; Vitaceae; Vitis.

Sequence 7, Application US/08927597

Sequence 7, Application US/08927597

Patent No. 6245503

GENERAL INFORMATION:

APPLICANT: BORNAN: CBERT

APPLICANT: BUYSE, MARIE-ANGE

TITLE OF INVENTION: PROTEINS FOR DIAGNOSTIC AND THERAPEUTIC USE

NUMBER OF SEQUENCES: 111

CORRESPONDENCE ADDRESS:

MUMBER OF SEQUENCES: 112

CORRESPONDENCE ADDRESS:

STREET: 1100 NORTH GLEBE ROAD

CITY: ARLINGTON

STREET: USON NORTH GLEBE ROAD

COUNTRY: U.S.A.

ZIP: 22201-4714

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PATENTIN Release #1.0, Version #1.25 (EPO)

CURRENT APPLICATION NUMBER: US/08/927,597

FILING DATE:

CITASSPERIED: CITATION NUMBER: US/08/927,597
